

Total and Section Score User Group Percentile Ranks by Gender and Race/Ethnicity

A student's percentile rank represents the percentage of students whose score is equal to or lower than their score. For example, if a student's score is in the 75th percentile, 75% of a comparison group achieved scores at or below that student's score. SAT User Group Percentiles are based on the actual scores of students in the graduating classes of 2017 and 2018 who took the new SAT (first offered in March 2016) during high school.

Please keep in mind that relationships between test scores and other factors such as educational background, gender, racial/ethnic background, parental education, and household income are complex and interdependent. These factors do not directly affect test performance; rather, they are associated with educational experiences both on tests and in schoolwork.
